

DONATIONS & CAMPAIGN PERFORMANCE ANALYSIS

for NGO *****

OUTLINE

- Introduction
 - Methodology
 - Key Results
 - Dashboard Overview
 - Discussion
 - Findings & Implications
 - Conclusion
-

EXECUTIVE SUMMARY

The analysis reveals that the organization heavily depends on one-time donations, with over 85% of donors not returning after their first contribution.

While channels like Google Ads bring high-value donors, they are underutilized. Campaign performance varies significantly, with Food campaigns delivering stable ROI and Education campaigns achieving the highest returns.

An A/B test simulation shows that targeted retention strategies can increase repeat donations by over 140%, especially among high-value donors.

The key opportunity lies in improving retention and scaling high-quality acquisition channels.

INTRODUCTION

This project analyzes donor behavior, campaign performance, and social impact for a non-profit organization.

The main objective is to identify growth opportunities by improving donor retention, optimizing acquisition channels, and increasing campaign efficiency.

The analysis is based on transactional donation data, donor attributes, campaign costs, and impact metrics.

METHODOLOGY

The analysis was conducted in two stages:

- Data preparation and exploratory analysis using Python (data cleaning, feature engineering, cohort analysis, segmentation).
- Dashboard development in Power BI using a star schema data model and DAX measures for KPI calculation.

Key techniques include:

- Cohort retention analysis
 - RFM-based donor segmentation
 - ROI and cost-efficiency analysis
 - A/B testing simulation for retention strategies
-

01.12.2024	1,00																							

DONOR RETENTION IS CRITICALLY LOW, WITH A SHARP DROP AFTER THE FIRST DONATION.

Chanel Perfomance

Acquisition channels differ significantly in quality:

- **Google Ads → high LTV, low volume**
 - **Facebook Ads → high volume, lower quality**
-

Campaign efficiency varies:

- **Food → stable ROI**
- **Education → highest peak ROI**
- **Emergency → lowest efficiency**

DASHBOARD OVERVIEW

DISCUSSION

The analysis highlights a structural issue: the organization prioritizes acquisition over retention.

This leads to high marketing costs and unstable revenue streams.

Additionally, high-value donors are primarily acquired through organic channels, indicating untapped potential in paid acquisition strategies.

FINDINGS & IMPLICATIONS

Customer retention is a key driver of growth, and improving it can significantly stabilize revenue.

High-value donors should be prioritized with personalized engagement.

Google Ads should be scaled as the most effective engagement channel.

Campaign strategy should balance:

- Food campaigns for sustainability.
- Education campaigns for maximum ROI.

Ineffective campaigns (high cost per person) need to be audited or restructured.

CONCLUSION

The organization has strong potential for growth but is currently limited by low retention and inefficient resource allocation.

By shifting focus toward donor retention and scaling high-quality channels, the organization can achieve more sustainable and predictable growth.
